Profundización EA-774

Justificación profundización

Proyecto MB

PEP EA-774: RS1EC.09K0.53.P0003

Se encuentra capa de interés con base 1834

Fondo del pozo:(1850,8) se quedó corto para evaluar la capa.

Necesidad para punzar, ensayar y producir: 25 mts debajo de la base (1859 mbbp)

Se solicita COLLAR en 1859 mbbp o mayor profundidad.

Para dejar collar en 1862,5 y zapato en 1877,1 se necesita perforar 30 metros.

Evaluación económica:

El equipo SAI 390 necesita bajar toda la columna de barras para sacar desarmando.

Costo estimado de profundización

4 hs equipo : aprox 2300 U\$D

Cañería: aprox 1180 U\$D

lodo sin costo adicional, ya preparado en las piletas.

Pozos del proyecto:

- **La profundidad final (con la profundización solicitada) será de compromiso para definir la profundidad final de los pozos que se ubicaran en la zona del EA734 : que seran EA- 805 , EA-808 y EA-827 (esta ubicación ya estaba en la zona).**
- **De no ser productiva la capa, las profundidades finales de las propuestas mencionadas serán ajustadas hasta 1700/1720 mbbp aproximadamente.**

- ACRP 500 l/h, n=1648, sal 2.2, pH=8 T=22°
- Nos encontramos 34 metros por encima en EA774.

- **Se recomienda profundizar por**
 - Costo de la profundización contenido (3500 U\$D)
 - Importancia para definir profundidad final pozos cercanos
 - Posición estructural favorable (34 mts encima de ACRP) y buena recuperación –ensayo de presión
 - Por ser capa última del pozo, de encontrarse alto caudal de agua no precisa cementación.
